

SPECIFICATIONS

Hardware	
Processor	Intel® CeleronTM 1.2 GHz
Hard Disk Drive	40GB
Memory	512 MB
Options	
40 GB Hard Disk Drive	Second HDD for additional storage/back up (recommended)
512 MB Additional RAM	Double RAM capacity to improve performance in busy network environments
Software	
Red Hat Linux 7.2 OS	
e-STUDIO KS-1000 server software	
Environmental Requirements	
Relative Humidity	Operating: 30% - 80% Shipping: 20% - 90%
Temperature Range	Operating: +10°C - +35°C Shipping: -30°C - +49°C
Power Supply	100-127/200-240V, 47-63Hz, 4/2A
Max Power Consumption	110 Watts
Dimensions (W x D x H)	339.9 x 269.88 x 67.4 (mm)
Weight	5.0 kg
Browser Requirements	
Netscape Navigator 6.2 or higher on the following platforms:	Windows 98/Me/2000/XP Mac OS 9/OS X Linux, Solaris
Microsoft, Internet Explorer 5.5 or higher on the following platforms:	Windows 98/Me/2000/XP
Operating Systems Supported (Browser)	Windows 98/Me/2000/XP
The e-STUDIO KS-1000 will work with the following protocols:	TCP/IP Microsoft Networking Protocol (Server Message Block SMB) SNMP LPR/LHD HTTP (secure)
The e-STUDIO KS-1000 will provide support for the following devices:	
Input	Scan directly to e-STUDIO KS-1000 Toshiba network connected MFDs with GL1010, GL1020 or e-BRIDGE Controllers Network Scanner supporting Scan-to-Network Share Server Message Block (Windows)
Output via distribution driver	Toshiba network connected MFDs and printers LPD connected printers Server Message Block (Windows) connected printers
The e-STUDIO KS-1000 requires the following for back up/archiving:	SMB Network Share with sufficient storage space

e-STUDIO KS-1000 - Entry level document management solution

Entry Level Document Management "In-a-Box"

The e-STUDIO KS-1000 is a compact, easy-to-use and simple to set-up, entry level document management system that will allow you to capture, file, store, retrieve, share and distribute documents quickly, easily and efficiently. This web-based software and hardware network solution is bundled on a small Toshiba appliance server, no bigger than a DVD player!

It can be installed as an extension to the powerful e-FILING features found on all Toshiba "e-BRIDGE Enabled" MFDs or as a completely stand-alone system. It will support a maximum of up to 40 users (10 – 20 concurrently). It's fully compatible with most manufacturers' MFD for input/output, but is specifically tuned to deliver optimum performance on Toshiba equipment.

The e-STUDIO KS-1000 will revolutionise your document workflow and processing. Depending on configuration, installation should take about 30 minutes.

Managing Information

Managing your documents effectively is the lifeblood of any business. The information they contain dictates how well you work and using and acting on that information directly affects your efficiency and profitability. Any business needs to create, edit, share, search and retrieve, output and send documents.

That's complicated when documents exist in many different formats (hard copy, company-generated text/image files, e-mails, faxes, web pages) and in many different locations (desks, PCs, the Web, rubbish bins and sometimes behind the filing cabinet!). It's hard to share a document when it's on another laptop, or at a different office, or buried in a folder or filing cabinet, or sometimes simply lost!

Capture and Organise

Capturing documents from multiple locations and in many different formats is the essential first step in any document management system. The e-STUDIO KS-1000 organises files and folders in one central location for easy access, search and retrieval by all designated users. The e-STUDIO KS-1000 can use different methods to capture documents:

- From Toshiba e-STUDIO or other compatible MFD systems
- From Computer or Network locations (Windows or Macintosh)
- From network scanners with or without Optical Character Recognition (OCR)
- From Windows Explorer – just drag 'n' drop files without launching browser
- From URLs on the World Wide Web

Once captured, the e-STUDIO KS-1000 will manage and organise that data. Public and confidential material can be kept in the same place because the e-STUDIO KS-1000 has a folder structure that allows you to control access to documents. Only the originator can access private folders. Shared folders can be accessed by a designated group of users. Levels of shared access can also be specified, determining designated users who can 'read and edit,' those who can 'read only' and those who may be 'denied' access.

Document Management Made Simple

The e-STUDIO KS-1000 is the perfect entry level document management solution for small/medium companies or department/workgroup level within larger organisations. It will help make your document workflow less work and more flow! You can set up folder scripts to automate routine tasks. For example, you may regularly work with a batch of scanned documents that need to be converted to editable text and then copied to a certain folder. Rather than having to manually instruct the e-STUDIO KS-1000 to perform these operations and repeat those instructions for each document you input, you can build a script from drop down menus to complete tasks automatically on any documents in a folder.

Store, Search and Retrieve

The e-STUDIO KS-1000 automatically archives documents or gives you the option to manually store them. A host of built-in back up and disaster recovery features (optional second HDD for local back up, back up to external devices and drives and a 'snap-shot' facility for quick restore) ensures your stored data is safe, no matter what happens.

Those documents can be quickly and easily retrieved, thanks to advanced search capabilities including full text, indexed and keyword searches. Documents can be located simply by using strings of characters including letters and numbers, dates or just numbers such as invoice amounts.

You can create search profiles using key words or phrases that will locate all files associated with a topic, project, supplier or any other search criteria you care to use.

Share and Collaborate

When different people need to work on a document or content is required from many sources or departments, it's often tricky keeping track of which version is most current. The e-STUDIO KS-1000 eliminates this confusion by requiring users to 'check documents out' and 'check them back in' whenever amendments or changes have been made. You'll get a complete document history so you know you're working with the most recent version.

Keep Private Folders Private

The e-STUDIO KS-1000 allows you to restrict access to certain folders using SSL authentication. Work folders can be designated as Public or Private, with specific access predetermined. Shared documents can be stored and maintained on the network with secure back up and archiving using advanced encryption/decryption technology.

Distribute

The e-STUDIO streamlines the process of document distribution and allows you to send documents to a single device or to multiple locations in a single step. Rather than forcing you to incur costs by purchasing compatible equipment, the e-STUDIO KS-1000 works within your existing environment. You can send documents to a variety of destinations including:

- Toshiba e-STUDIO MFDs
- Network MFDs
- LPR-connected printers
- Network fax machines with drivers
- Email addresses
